additional improvements

- 1. restyle the modal to take on a more immersive full page experience.
- 2. add in copy to tell the user why to sign up or login, our value proposition.
- 3. add in tool tips that describe each input field and describe the process. regarding FB.

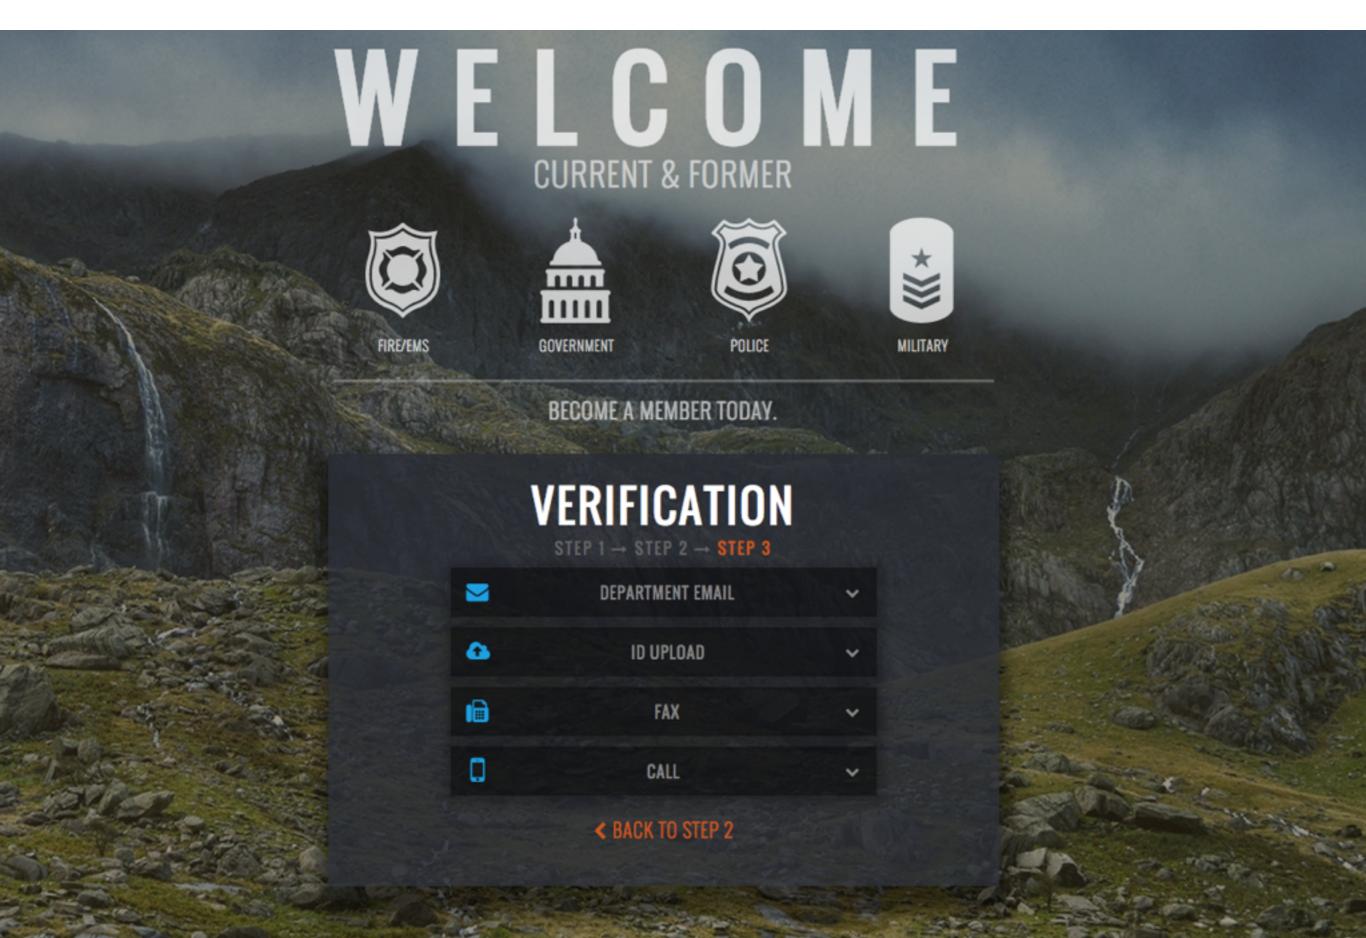

Registration page

Step 1

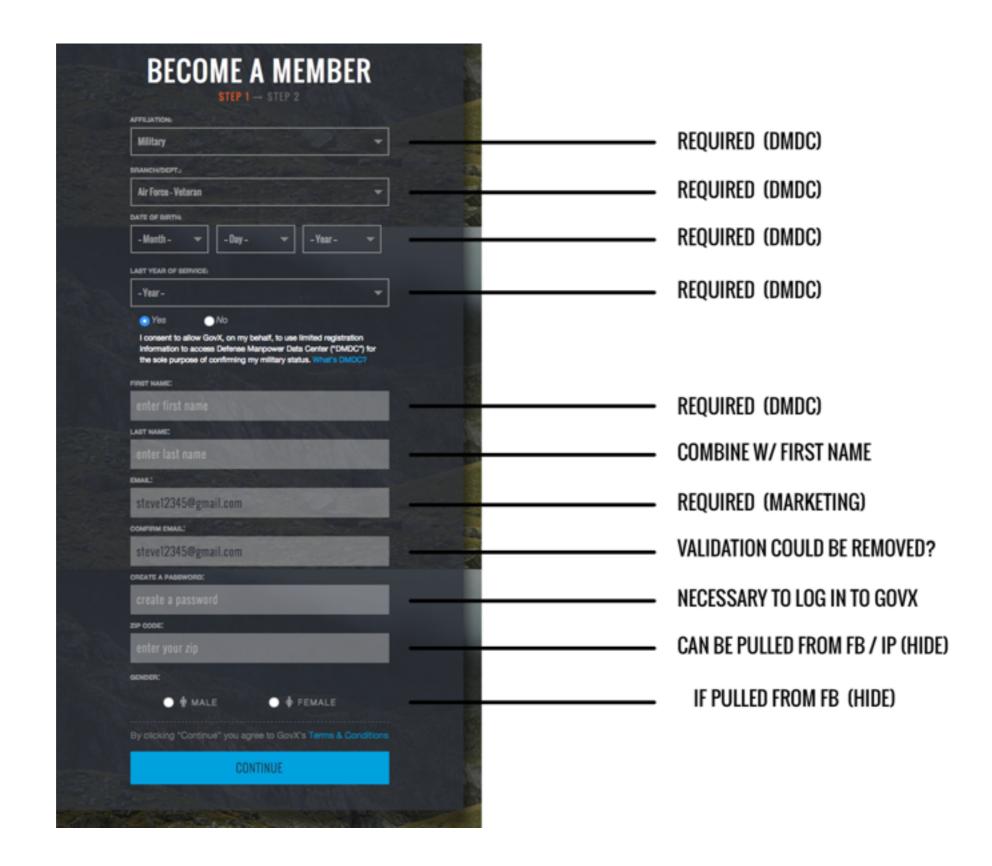

Step 3

current reg fields

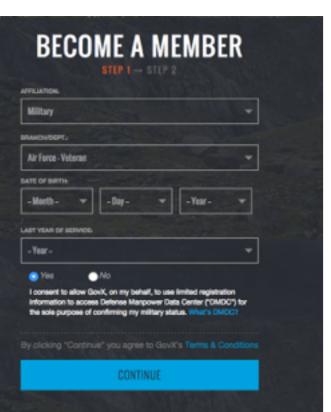

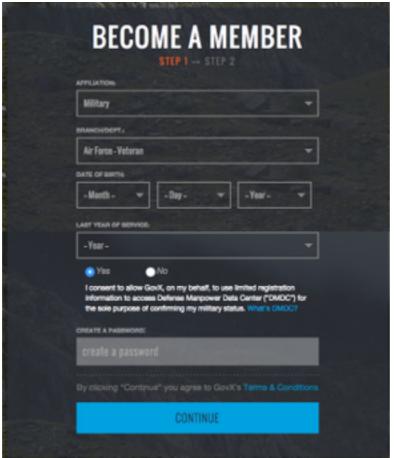

POTENTIAL SIGN UP FORM SIZE CHANGE

*if we hide the fields that have data input in them from social log in we could have incorrect data for dmdc.

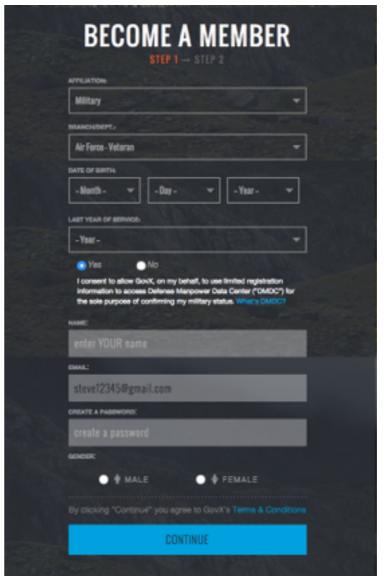

USER W/ FB SIGN IN W/ PW

USER W/FB SIGN IN NO PW

GENERAL COMBINATION OF FIELDS

CURRENT REG FORM

Recommendations

- 1. remove confirm email field
- 2. hide zip field and populate with IP or social city/state.
- 3. combine the first and last name onto one line
- 4. if using social media to login hide gender if we can pull it from Facebook.
- 5. if logging in with Facebook hide password field. (possibly put a note in so people can add a password if they want during this phase.)
- 6. update the animation of the jQuery steps to slide the content over rather than show hide so it is more intuitive.
